DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 9 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rosset (US Patent 3,375,288).

With respect to claims 9 and 10, Rosset discloses a catalytic process for the dehydrogenation of an organic compound by contacting under dehydrogenation conditions with a supported catalyst consisting of nickel as the active catalytic compound promoted with silver (See column 1, lines 25-26; column 2, lines 7-18). Rosset also discloses that support of the catalyst is alumina, chromia-alumina, chromia-magnesia (See column 2, lines 10-13).

Rosset invention does not specifically disclose silver percentage of the catalyst, however, the invention does disclose "The particular composition of a given catalyst as it may be employed in the present invention will, of course, be determined in accordance with the particular feedstock, reaction conditions and extent of conversion desired, in a manner known to those skilled in the art." (Column 2, lines 25-30). Thus, it would have been obvious to one skilled in the art at the time the invention was made to modify Rosset invention and use a percentage of silver in the catalyst in a range, including as claimed, for an effective dehydrogenation.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
